

m57labs – Capability Statement

Software Studio · Operated by Atriam, Inc.

CORE COMPETENCIES

- **Custom software engineering** — mission-critical systems designed, built, and operated end-to-end by senior engineers.
- **Web & mobile applications** — secure, accessible applications for field staff, offices, and the public.
- **Data platforms & APIs** — pipelines and system-to-system integration across legacy and modern stacks.
- **Applied AI, automation & assurance** — applied-AI systems and automation with explicit controls, human oversight, and reviewable assurance evidence.
- **Legacy modernization** — incremental replacement of aging systems without disrupting operations.
- **Cloud architecture** — secure, cost-aware infrastructure and deployment practices.

DIFFERENTIATORS

- **Senior-only team.** The engineers who scope the work build the work — no hand-offs, no bench.
- **We build our own products.** We design, build, and deploy our own commercial software, so we engineer for maintenance, uptime, and total cost of ownership rather than handing off at delivery.
- **Applied AI, engineered in-house.** We have built and deployed voice-AI systems end to end — speech recognition, routing, and workflow automation.
- **Small-team speed.** Direct access to principals; days-not-weeks turnaround on scoping and change requests.

AI ASSURANCE PILOT

AVAILABLE FOR A SCOPED PILOT Local-first AI system inventory, control-to-evidence mapping, gap findings, portable reports, a terminal UI, and a root-confined, read-only MCP interface. Supports control-level evidence review. Does not certify compliance or replace legal, privacy, security, acquisition, or authorized-official review.	• System inventory • Control mapping • Evidence gap register • TUI + MCP integration
---	--

PRODUCT EXPERIENCE

Commercial products designed, built, and deployed by the m57labs team (Atriam, Inc.):

Atriam — construction operations platform atriam.ai Scheduling, field reporting, and document workflows for construction firms. Architecture, build, and deployment by this team.
SiteCall — ai communications platform sitecall.ai Voice AI for inbound call handling — speech recognition, routing, and workflow automation engineered in-house.
